

Information Technology University of the Punjab
SE460T Cloud Computing with Big Data Applications – Fall 2025
Quiz 1 – October 17, 2025

Name: _____

Roll No.: _____

Time allowed: 15 minutes

Maximum Marks: 16

1. Which statement reflects a design principle of the security pillar of the Well-Architected Framework? [1]
 - a. Do not deploy a solution to production until you're certain that no security risks exist.
 - b. Apply security at all layers of an architecture.
 - c. Ensure that staff are actively monitoring potential risks manually.
 - d. Decentralize privilege management.
2. Which statement about AWS Identity and Access Management (IAM) is true? [1]
 - a. With IAM, you can manage encryption for items that require encryption at rest.
 - b. With IAM, you can grant principals granular access to resources.
 - c. IAM provides an audit trail of who performed an action, what action they performed, and when they performed it.
 - d. IAM provides an extra layer of security by offering anomaly detection on resources.
3. Which statement reflects a best practice for the root user on an AWS account? [1]
 - a. To avoid getting locked out of the account, do not enable multi-factor authentication (MFA) on the root account.
 - b. Remove unneeded permissions from the root user account.
 - c. Create two root users with separate credentials and distribute them to two different individuals.
 - d. Create an admin user and perform most admin tasks with this user instead of the root user.
4. How does AWS Identity and Access Management (IAM) evaluate a policy? [1]
 - a. It checks for explicit allow statements before it checks for explicit deny statements.
 - b. It checks for explicit deny statements before it checks for explicit allow statements.
 - c. If the policy doesn't have any explicit deny statements or explicit allow statements, users have access by default.
 - d. An explicit deny statement does not override an explicit allow statement.
5. Which AWS Identity and Access Management (IAM) policy element includes information about whether to allow or deny a request? [1]
 - a. Effect
 - b. Condition
 - c. Principal
 - d. Action
6. Which option accurately describes the statement element in an AWS Identity and Access Management (IAM) policy? [1]
 - a. The statement element does not apply to identity-based policies.
 - b. The statement element contains other elements that together define what is allowed or denied.
 - c. The statement element is an optional part of an IAM policy.
 - d. A policy can only have one statement element.
7. Amazon S3 provides a good solution for which use case? [1]
 - a. A data warehouse for business intelligence
 - b. Hourly storage of frequently accessed temporary files
 - c. Ledger data that is updated and accessed frequently
 - d. An internet-accessible storage location for video files that an external website can access
8. A company is interested in using Amazon S3 to host their website instead of a traditional web server. Which types of content does Amazon S3 support for static web hosting? (Select THREE.) [3]
 - a. Video and sound files
 - b. Client-side scripts
 - c. Dynamic HTML files
 - d. Database engine
 - e. HTML files and image files
 - f. Server-side scripts

9. A company wants to use an S3 bucket to store sensitive data. Which actions can they take to protect their data? (Select TWO.) [2]
- a. Using client-side encryption to protect data in transit before it is sent to Amazon S3
 - b. Uploading unencrypted files to Amazon S3 because Amazon S3 encrypts the files by default
 - c. Enabling server-side encryption on the S3 bucket after uploading sensitive data
 - d. Using Secure File Transfer Protocol (SFTP) to connect directly to Amazon S3
 - e. Enabling server-side encryption on the S3 bucket before uploading sensitive data
10. A company needs to retain records for regulatory purposes for a 7-year period. These records are rarely accessed (once or twice a year). What is the lowest-cost storage class for Amazon S3? [1]
- a. S3 Glacier Deep Archive
 - b. S3 Standard-Infrequent Access (S3 Standard-IA)
 - c. S3 One Zone-Infrequent Access (S3 One Zone-IA)
 - d. S3 Intelligent-Tiering
11. A customer service team accesses case data daily for up to 30 days. Cases can be reopened and require immediate access for 1 year after they are closed. Reopened cases require 2 days to process. Which solution meets the requirements and is the most cost efficient? [1]
- a. Store case data in S3 Standard. Use a lifecycle policy to move the data into S3 Standard-Infrequent Access (S3 Standard-IA) after 30 days.
 - b. Store all case data in S3 Standard so that it is available whenever it is needed.
 - c. Store case data in S3 Standard. Use a lifecycle policy to move the data into Amazon S3 Glacier Flexible Retrieval after 30 days.
 - d. Store case data in S3 Intelligent-Tiering to automatically move data between tiers based on access frequency.
12. Which option takes advantage of edge locations in Amazon CloudFront to transfer files over long distances to an S3 bucket? [1]
- a. AWS Transfer Family
 - b. Amazon S3 REST API
 - c. Amazon S3 Transfer Acceleration
 - d. AWS SDKS
13. A video producer must regularly transfer several video files to Amazon S3. The files range from 100-700 MB. The internet connection has been unreliable, causing some uploads to fail. Which solution provides the fastest, most reliable, and most cost-effective way to transfer these files to Amazon S3? [1]
- a. AWS Management Console
 - b. Amazon S3 Transfer Acceleration
 - c. Amazon S3 multipart uploads
 - d. AWS Transfer Family
